

OPEC+: Supply hike for third month in a row

- On Saturday, OPEC+ agreed to boost its crude-oil output for the third month in a row despite dissent from a faction led by Russia. Meanwhile, Saudi Arabia doubled down on a historic shift, driving prices lower as the country reclaim its share of global markets
- The group will implement a production adjustment of 411 Kbb/d in July, from June's required output. This decision is still in the framework agreed on December to start a gradual return of the [2.2 Mbb/d](#) voluntary cuts starting in April
- In addition, the group said the gradual increases may be paused or reversed subject to evolving market conditions. This flexibility will allow continuing to support oil market stability. In addition, OPEC+ countries also noted this measure will provide an opportunity for other members to accelerate their compensation
- This meeting comes after the [adjustment of the same magnitude for June](#) and the [surprise increase of 311 Kbb/d for May](#), when it was also decided to bring back triple the previously planned volume. It is worth noting that the voluntary reductions of 1.65 Mbb/d –introduced in [April 2023](#)– are set to last until [December 2026](#)
- The last two previous decisions have triggered a drop in prices of about 14% since the end of March, even hitting four-year lows below 60 \$/bbl in early May. However, the recent decision was offset by the increased geopolitical risk in Ukraine and Iran, as well as the wildfires in Canada that threaten production. In this sense, Brent and WTI started the week with a rebound of 3.0%, reaching 64.7 and 62.3 \$/bbl, respectively
- In this backdrop, [we maintain a view of lower crude-oil prices](#) amid concern that additional supply and the trade war could lead to an oversupply. As such, we reiterate our estimate for Brent to trade within a range between 55 and 75 \$/bbl for the remainder of the year
- The next eight OPEC+ meeting is scheduled for July 6th, 2025, to decide on August production levels. Moreover, the next Ministerial Meeting will take place on November 30th, 2025

Guide for investment recommendations.

	Reference
BUY	When the share expected performance is greater than the MEXBOL estimated performance.
HOLD	When the share expected performance is similar to the MEXBOL estimated performance.
SELL	When the share expected performance is lower than the MEXBOL estimated performance.

Even though this document offers a general criterion of investment, we urge readers to seek advice from their own Consultants or Financial Advisors, in order to consider whether any of the values mentioned in this report are in line with their investment goals, risk and financial position.

Determination of Target Prices

For the calculation of estimated target prices for securities, analysts use a combination of methodologies generally accepted among financial analysts, including, but not limited to, multiples analysis, discounted cash flows, sum-of-the-parts or any other method that could be applicable in each specific case according to the current regulation. No guarantee can be given that the target prices calculated for the securities will be achieved by the analysts of Grupo Financiero Banorte S.A.B. C.V, since this depends on a large number of various endogenous and exogenous factors that affect the performance of the issuing company, the environment in which it performs, along with the influence of trends of the stock market, in which it is listed. Moreover, the investor must consider that the price of the securities or instruments can fluctuate against their interest and cause the partial and even total loss of the invested capital.
