OPEC+: Greater production ramp-up for August

- OPEC and its allies (OPEC+) announced on Saturday a larger-than-expected increase in crude-oil output for August, marking the fourth consecutive monthly hike. This move is part of a broader strategy to reclaim market share through price competitiveness
- The eight OPEC+ countries —Saudi Arabia, Russia, Iraq, UAE, Kuwait, Kazakhstan, Algeria, and Oman— will raise production by 548 Kbb/d in August, following more modest adjustments in [May \(+311 Kbb/d\)](#), [June \(+411 Kbb/d\)](#), and [July \(+411 Kbb/d\)](#)
- This acceleration suggests that the December agreement to gradually unwind the [2.2 Mbb/d](#) in voluntary cuts could conclude as early as September 2025, one year ahead of the original timeline (September 2026). So, market anticipates the remaining supply —approximately 520 Kbb/d— will be fully restored by September
- It is worth noting that the voluntary reductions of 1.65 Mbb/d —introduced in [April 2023](#)— are set to last until [December 2026](#)
- The communiqué emphasized that the gradual increases may be paused or reversed subject to evolving market conditions. This optionality is intended to support ongoing oil market stability. Additionally, the group highlighted that this window allows participating countries to accelerate compensation for any overproduction since January 2024
- Crude-oil prices have exhibited heightened volatility in recent months. Brent and WTI had previously priced in 20% geopolitical risk premia amid Middle East tensions, pushing prices to five-month highs. However, this premia was fully unwind following the ceasefire agreement between Israel and Iran. Post-OPEC+ announcement, Brent and WTI declined roughly 1.0%, although they stabilize starting this session at 68.7 \$/bbl (+0.6%) and 67.1 \$/bbl (+0.1%), respectively
- Despite peak seasonal demand during the summer months, the energy market balance continues to tilt toward surplus in the near term. Chinese consumption has softened, and US tariffs poses downside risks to global growth. Against this backdrop, [we maintain a bearish bias on crude-oil prices and reiterate our estimate for Brent](#) to trade within a 55–75 \$/bbl range for the remainder of the year
- The next meeting of the eight OPEC+ members is scheduled for August 3rd, 2025, to determine September production targets. Meanwhile, the Ministerial Meeting will take place on November 30th, 2025

BUY	When the share expected performance is greater than the MEXBOL estimated performance.
HOLD	When the share expected performance is similar to the MEXBOL estimated performance.
SELL	When the share expected performance is lower than the MEXBOL estimated performance.

Even though this document offers a general criterion of investment, we urge readers to seek advice from their own Consultants or Financial Advisors, in order to consider whether any of the values mentioned in this report are in line with their investment goals, risk and financial position.

Determination of Target Prices

For the calculation of estimated target prices for securities, analysts use a combination of methodologies generally accepted among financial analysts, including, but not limited to, multiples analysis, discounted cash flows, sum-of-the-parts or any other method that could be applicable in each specific case according to the current regulation. No guarantee can be given that the target prices calculated for the securities will be achieved by the analysts of Grupo Financiero Banorte S.A.B. C.V, since this depends on a large number of various endogenous and exogenous factors that affect the performance of the issuing company, the environment in which it performs, along with the influence of trends of the stock market, in which it is listed. Moreover, the investor must consider that the price of the securities or instruments can fluctuate against their interest and cause the partial and even total loss of the invested capital.
